ELMER GALO

Front End Developer

📞 336-508-0497
✉ galoelmer@gmail.com
🌐 galoelmer.github.io
📍 Greensboro, NC

Currently seeking a career change from a non-technical position to a technical one. Successful in both team and self-directed settings while working in the Warehousing and Distribution industry for over five years. Eager to apply academic and professional background towards launching a thriving career as a web developer.

WORK EXPERIENCES

Front-End Developer
Apprenticeship | Present

Front-End Web Developer with a bachelor's degree in information technology. Obtained a certification as a Full Stack developer from the University of North Carolina at Chapel Hill. Currently working on personal projects to developed my skills in JavaScript, CSS, and the MERN stack.

Unloader/Processor
Walmart Distribution Center | 2016 - Present

Manage freight deliveries through processing, identifying, counting, separating and scanning freight; operating computer software and basic applications to track and identify freight; unloading freight from trailer manually or with power equipment.

PROJECTS

LOTR Memory Challenge
https://lotrmemorygame.vercel.app/

This is a memory game that consists of memorizing images from characters of the Lord of the Rings movies. Players must click each image just once and be able to remember the clicked image.

- The interface is developed with React JS and Material-UI framework to handle components styling.
- The React-Spring library is used to add a transition effect on images.
- React context API is used to manage the game overall global states.

Tech News Web Application
https://mytechnews.netlify.app/

This web application uses the News API to retrieve and show the latest breaking news in technology from news sources and blogs across the web.

- The interface is build with React JS, Material-UI framework and Formik, a open source form library for React.
- This app implements serverless functions from netlify to handle API request.
- Redux is used as state management to handle global state data and Firestore as a cloud database to store users and News data.
